(57) **Abstract:** The present invention relates to a sealing jaw for manufacturing a sealing seam (19) in a heats sealable packaging material. The invention furthermore relates to an induction sealing device with a sealing jaw and to a packaging machine with induction sealing device. In order to provide a sealing jaw with which a sealed and durable sealing seam can be produced, even when solid components of the in-filled product are trapped between the jaws that have to be moved towards one another, a sealing jaw is proposed with means of a sealing jaw with a sealing surface that is provided in order to come into contact with the heat-sealable material, and a rod or bar-shaped heating device (22) that is provided in order to heat up the heat= sealable material, wherein a pressure element (23) is provided on the sealing surface, projecting above said sealing surface, and distanced from the heating device.
